PROJECTS

Doctors Near Me | killeraliens.github.io/doctors-near-me

Doctors Near Me is an app that locates and displays medical professionals based on your location, insurance plan, or specialty search inputs. This project utilizes OOJS & constructor functions to pull doctor info from highly nested JSON objects, as well as ES 2017 features to sequence multiple API calls for its filter results.

Built with HTML5, CSS, jQuery, JavaScript, Better Doctor API, Google Maps JavaScript API, Google Geocoding and Reverse Geocoding APIs

Goat's Guide | www.goatsguide.com

Goat's Guide is a heavy metal event & venue database concept as well as an ongoing study in UX design. I am currently reworking this project using React, Express/Node to reduce app loading time, and encourage user participation with the integration of Facebook's Graph API.

The current live version is built with Ruby on Rails, and utilizes HTML-scraping gems such as Watir and Nokogiri, along with custom background tasks/Sidekiq to collect event data. Uses Devise gem for authentication. PostgreSQL database. Deployed with Heroku.
